**Abstract:** (9font, Times New Roman, bold) The study of quantitative protein is very important and valuable in biochemical and clinical test as well as food test. In this paper, a review on the quantitative analysis of protein is presented in details, pertaining especially to the determination of protein and their applications using spectrophotometer method, fluorescent method and resonance Raleigh scattering method. Moreover, many important reaction systems and their analytical characteristics are displayed in the tables in order to keep this paper for reference.
